

Develop the web application using Node-RED Steps Followed

Date	10 November 2022
Team ID	PNT2022TMID18625
Project Name	Project – Smart Solution For Railways

Develop The Web Application Using Node-RED

Location Tracking:

- A web application is developed using node red to track the live location of the train by receiving the latitude and longitude value of the location through GPS module.

- The received values will be updated in the IBM Watson IoT Platform through a python code.
 - A node red is used to obtain the value form the IBM Watson IoT and to locate the values in the Map.
 - When the python code is made to Run the Location is updated in IBM Watson IoT Platform with a delay of 3 seconds.
- Open the Node-RED project:
- Added code to get QR Generator:

```
service.set_service_url('https://apikey-v2-16u3ermdpghhxfdikvpssoh5fwezrmuup5fv5g3ubz:b0ab119145d3e6255eabb97')

cap= cv2.VideoCapture(0)
font = cv2.FONT_HERSHEY_PLAIN

while True:
    _, frame = cap.read()
    decodedObjects = pyzbar.decode (frame)
    for obj in decodedObjects:
        #print ("Data", obj.data)
        a=obj.data.decode('UTF-8')
        cv2.putText(frame, "Ticket", (50, 50), font, 2, (255, 0, 0), 3)

        #print (a)
        try:
            response = service.get_document(
                db='booking',
                doc_id = a
            ).get_result()
            print (response)
            time.sleep(5)
        except Exception as e:
            print ("Not a Valid Ticket")
            time.sleep(5)

    cv2.imshow("Frame",frame)
    if cv2.waitKey(1) & 0xFF ==ord('q'):
        break

cap.release()
```

- Create the QR Generator :
