### **Project Report**

Project Name: SMART SOLUTIONS FOR RAILWAYS

Team ID: **PNT2022TMID18625** 

**TEAM LEAD:** 

VISHNU M

**TEAM MEMBERS:** 

Sowmiya R B

Vidhyasri K V

Vennilaakshaya V

### 1. INTRODUCTION

### 1.1 Project Overview

As trains are one of the most preferred modes of transportation among middle class and impoverished people as it attracts for its amenities. Simultaneously there is an increase at risk from thefts and accidents like chain snatching, derailment, fire accident. In order to avoid or in better words to stop all such brutality we came up with a solution by providing an application which can be accessed by the user after booking their tickets. With a single click this app addresses issues by sending a text message to TC and RPF as an alert. In our project we use Node-Red service, app-development, IBM cloud platform to store passenger data. **1.2 Purpose** 

The purpose of this project is to report and get relived from the issues related to trains.

### 2. LITERATURE SURVEY

### 2.1 Existing problem

- A Web page is designed for the public where they can book tickets by seeing the available seats.
- After booking the train, the person will get a QR code which has to be shown to the Ticket Collector while boarding the train.
- The ticket collectors can scan the QR code to identify the personal details.
- A GPS module is present in the train to track it. The live status of the journey is updated in the Web app continuously
- All the booking details of the customers will be stored in the database with a unique ID and they can be retrieved back when the Ticket Collector scans the QR Code.

	railways using RFID technology	K.P. Soman		RFID

## 2.3 Problem Statement Definition

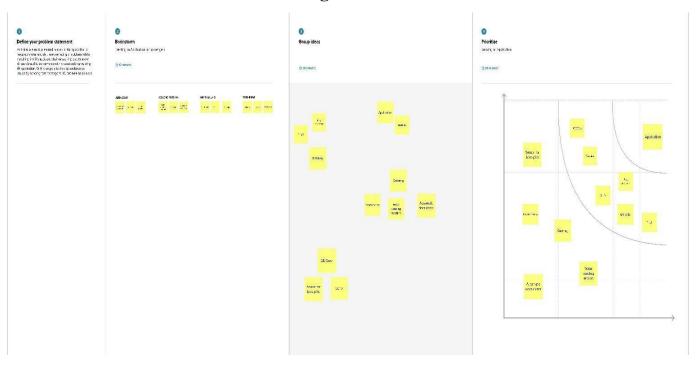

Smart Solutions for railways are designed to reduce the work load of the user and the use of paper.

## 3. IDEATION & PROPOSED SOLUTION

### 3.1 Empathy Map Canvas

# 3.2 Ideation & Brainstorming

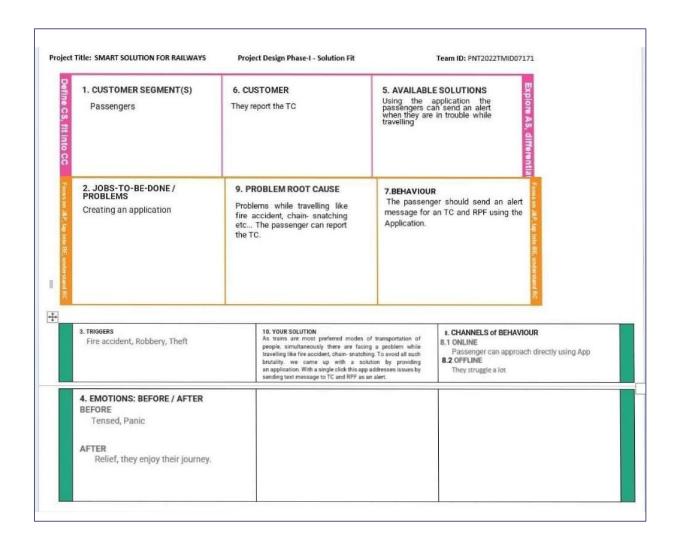

# 3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Problems in the railways like robbery, fire accidents etc
2.	Idea / Solution description	Developing an app for the passengers.
3.	Novelty / Uniqueness	The passengers can send an alert to the respective officials during the travel time through the app when they are in trouble so that they can easily solve it.

4.	Social Impact / Customer Satisfaction	Usage of this app can be a great relief to the passengers, so that they can travel without any
		fear.
5.	Business Model (Revenue Model)	5000
6.	Scalability of the Solution	This solution will be useful for passengers while
		travelling. They can use the app between the
		time of their travel. The users will fell more
		secured, in-case of an emergency by simply
		clicking on a button the alert signal will be sent
		to the respective officials and the corresponding
		measures will be taken.

#### 3.4 Problem Solution fit

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional requirement

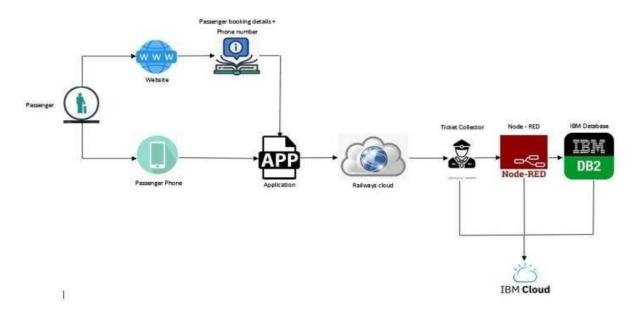

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Online Registration
		through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation
		via OTP
FR-3	Application installation	The application is installed through the given link
FR-4	User access	Access the app requirements

# 4.2 Non-Functional requirement

FR No.	Non-Functional Requirement	Description	
NFR-1	Usability	The app can be used during the travelling time	
		<ul><li>Easy and simple</li><li>Efficiency is high</li></ul>	
NFR-2	Security	By clicking on the icon, the alert will be given to the respective officials	
NFR-3	Reliability	Highly reliable to use	
NFR-4	Performance	Low error rate	
NFR-5	Availability	Free source	
NFR-6	Scalability	It is scalable enough to support many users at the same time	

### 5. PROJECT DESIGN

### **5.1 Data Flow Diagrams**

#### **5.2 Solution Architecture**

As trains are one of the most preferred modes of transportation among middle class and impoverished people as it attracts for its amenities. Simultaneously there is an increase at risk from thefts and accidents like chain-snatching, derailment, fire accident. In order to avoid or in better words to stop all such brutality we came up with a solution by providing an application which can be accessed by the user after booking their tickets. With a single click this app addresses issues by sending a text message to TC and RPF as an alert. In our project we use Node-Red service, app-development, IBM cloud platform to store passenger data.

#### 5.3 User Stories

User Type	Functional	User	User Story / Task	Acceptance criteria	Priority	Release
	Requirement	Story				
	(Epic)	Num

PASSENGER	Booking	USN-1	As a passenger, I book	I can access the web link to install the	High	Sprint-1
(Mobile	registrat		the ticket for the	application.		
user)	ion		journey by entering my			
			personal information.			
	Confirmation	USN-2	As a passenger, I will	I can receive confirmation email &	High	Sprint-1
			receive confirmation of	click confirm.		
			the booking once I have			
			registered for the			
			application			
	Applicat ion	USN-3	As a passenger, I	I can register & access the application	Low	Sprint-2
	registrat ion		can register for	through google login.		
			the application			
			through the			
			weblink.			
	Application	USN-4	As a passenger, I can access		Medium	Sprint-1
	access		the application during my			
			travel for resolving my			
			issues.			

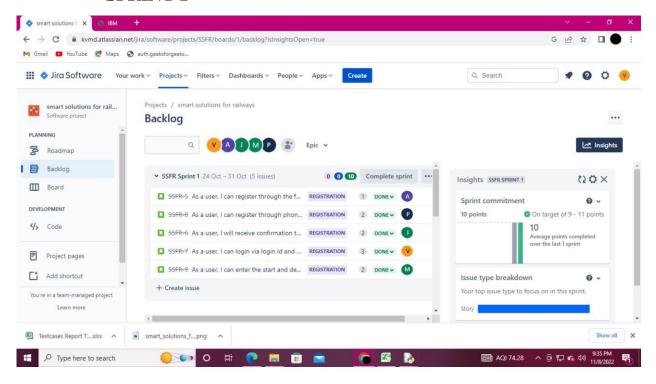

# 6. PROJECT PLANNING & SCHEDULING

**6.1 Sprint Planning & Estimation** 

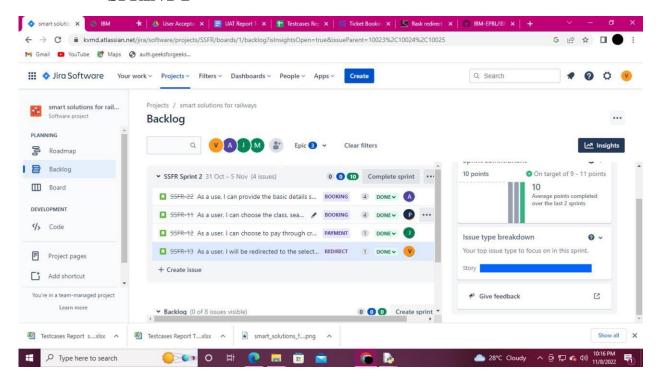

STEP 1	Identify the problem
STEP 2	Prepare an abstract, problem statement
STEP 3	List required objects needed
STEP 4	Create a code and run it
STEP 5	Make a prototype
STEP 6	Test with the created code and check the designed prototype is working
STEP 7	Solution for the problem is found

### 6.2 Reports from JIRA

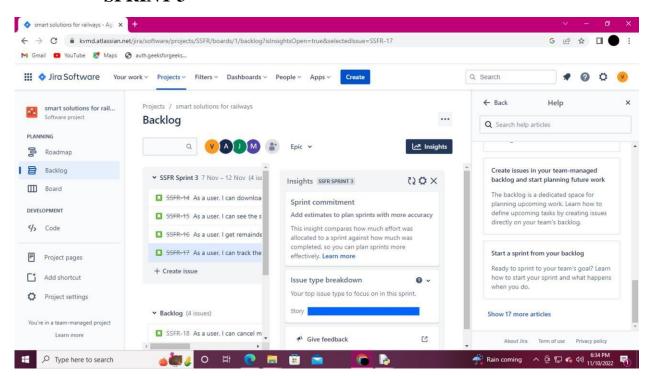

### **SPRINT 1**

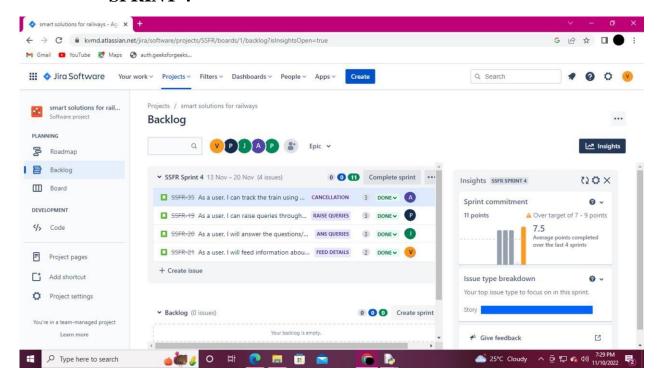

#### **SPRINT 2**

#### **SPRINT 3**

#### **SPRINT 4**

### 7. CODING & SOLUTIONING

#### 7.1 Feature 1

- IoT device
- IBM Watson Platform
- Node red
- · Cloudant DB
- Web UI
- MIT App Inventor
- Python code

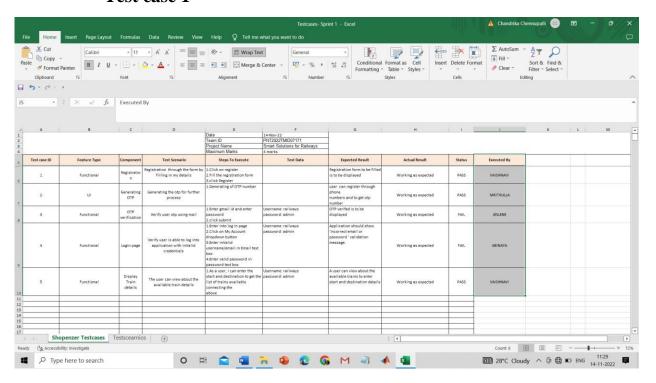

#### 7.2 Feature 2

- Login
- Verification
- Ticket Booking
- Adding rating

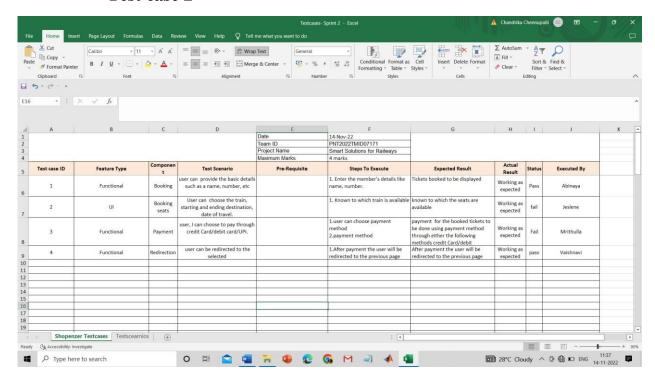

### 8. TESTING AND RESULTS

#### 8.1 Test Cases

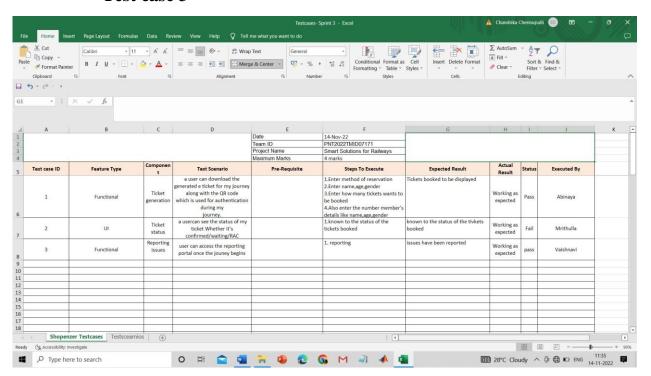

### Test case 1

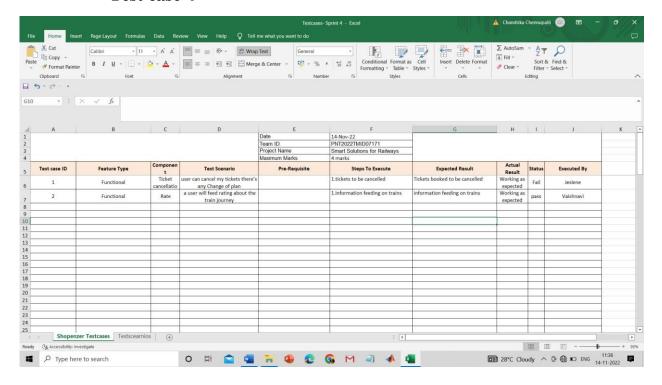

#### Test case 2

#### Test case 3

### Test case 4

### 9. ADVANTAGES

- The passengers can use this application, while they are travelling alone to ensure their safety.
- It is easy to use.
- It has minimized error rate.

### 10. DISADVANTAGES

☐ Network issues may arise.

### 11. CONCLUSION

Almost all the countries across the globe strive to meet the demand for safe, fast, and reliable rail services. Lack of operational efficiency and reliability, safety, and security issues, besides aging railway systems and practices are haunting various countries to bring about a change in their existing rail infrastructure. The global rail industry struggles to meet the increasing demand for freight and passenger transportation due to lack of optimized use of rail network and inefficient use of rail assets. Often, they suffer from the lack in smart technologies and latest technological updates to provide the most efficient passenger services. This is expected to induce rail executives to build rail systems that are smarter and more efficient. The passenger reservation system of Indian Railways is one of the world's largest reservation models. Daily about one million passengers travel in reserved accommodation with Indian Railways. Another sixteen million travel with unreserved tickets in Indian Railways. In this vast system, it is a herculean task to efficiently handle the passenger data, which is a key point of consideration now-a-days. But the implementation of the latest technological updates in this system gradually turns inevitable due to increasing demand for providing the most efficient passenger services. Handling the passenger data efficiently backed by intelligent processing and timely retrieval would help backing up the security breaches. Here we've explored different issues of implementing smart computing in railway systems pertaining to reservation models besides pointing out some future scopes of advancement. Most significant improvements have been evidenced by more informative and userfriendly websites, mobile applications for real-time information about vehicles in motion, and eticket purchases and timetable information implemented at stations and stops. With the rise of Industry, railway companies can now ensure that they are prepared to avoid the surprise of equipment downtime. Like above mentioned, the developed application of our project can lead the passenger who travel can travel safely without any fear.

### 12. FUTURE SCOPE

This application is ensured for safety for the passengers while they are travelling alone as well as they travel with their family or friends.

In future, this application may also be used by passengers who travel through bus. By further enhancement of the application the passengers can explore more features regarding their safety.
